SITUATION SUMMARY

California Department of Public Health Zika Virus and Meningococcal Disease Update

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika virus disease. The California Department of Public Health (CDPH) and Emergency Medical Services Authority (EMSA) are currently the only Emergency Function 08 (EF 08) partners at the state level reporting on this activation.

- The MHCC is coordinating with EF 08 partners, healthcare facilities and local health departments (LHDs) to ensure responses are timely and accurate.
- CDPH and EMSA Duty Officer Programs are monitoring the Zika virus disease outbreak after hours and remain in communication with the Regional Disaster Medical and Health Coordination (RDMHC) and the Medical Health Operational Area Coordinator (MHOAC) Programs throughout California.

Zika Virus

- As of Friday, 12/02/16, there have been 423 travel-associated Zika virus infections in California.
- This number reflects an increase of 36 from the 387 cases reported in the last operational period.
- CDPH centers and programs continue to monitor Zika virus disease and provide information to the MHCC related to their specific activities on a weekly basis.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

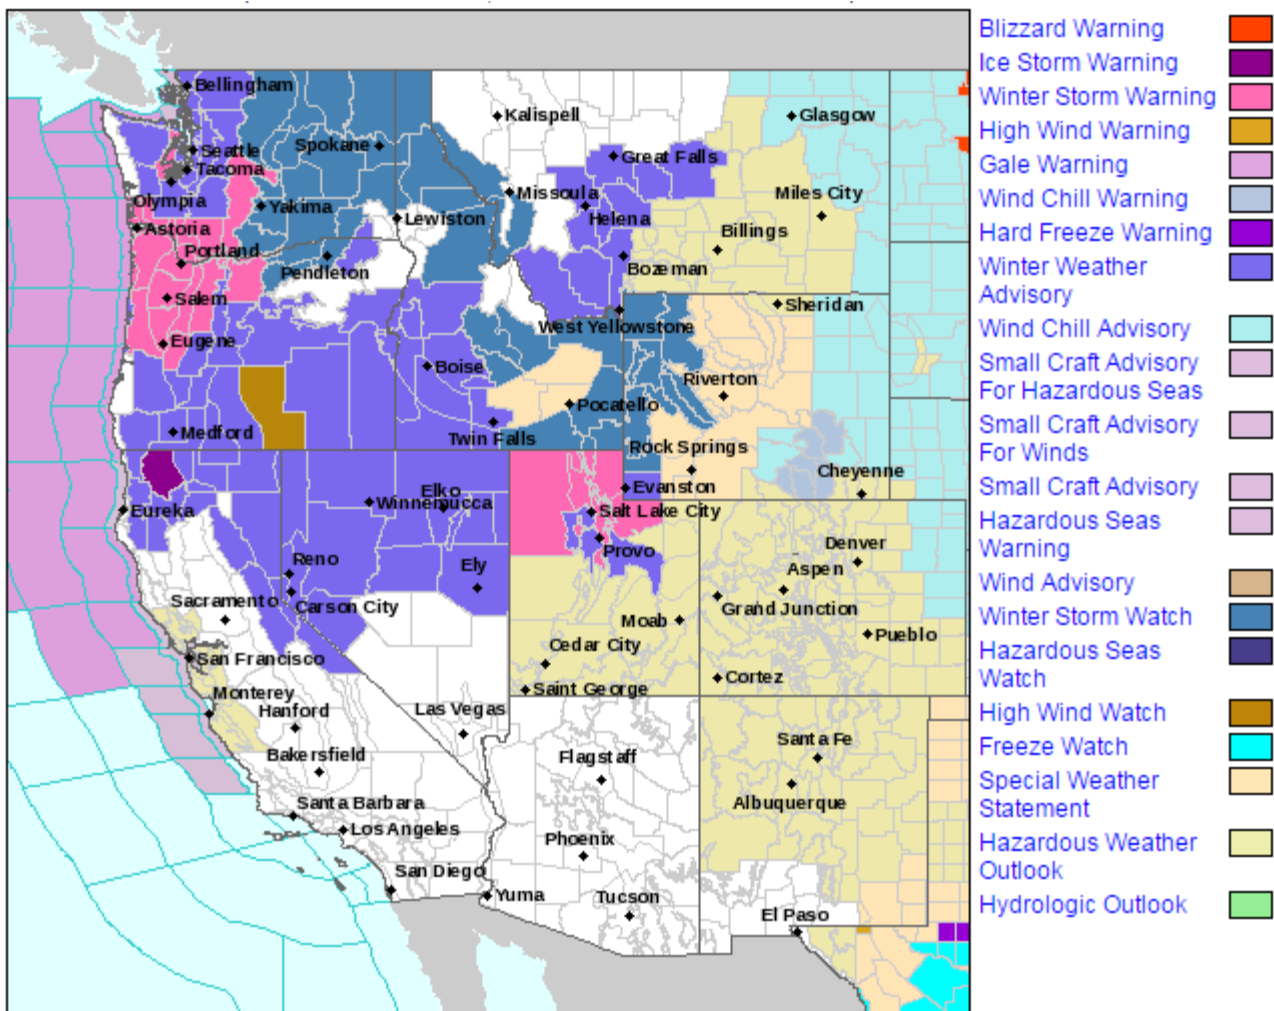

Northern California will be visited by another string of wet weather systems starting tonight. Cold air is expected to linger in some of the valley areas and this will provide a chance of freezing rain to occur in such locations overnight. Overall, however, the incoming systems will be warmer, and snow levels will soon rise quickly. Some gusty winds will develop ahead of this first incoming system. A short break between systems is expected Saturday before more precipitation starts in Sunday and lasts into the middle of next week. Westerly flow will become established over the region this weekend and last through early next week, and that makes it difficult to determine the details of when each system will arrive. For now, expect some periods of rather heavy precipitation early next week. All areas of Northern California ought to receive quite a bit of precipitation by the end of the next 7 days, especially our Northwest areas and the Eastern mountains. Snow levels could be as low as about 1000 feet tonight and early Thursday, then will quickly rise to around 4500-5500 feet. The most significant snow accumulations will be from about 5500 feet and higher through this series of storms.

SOUTHERN CALIFORNIA

The back side of a Pacific trough will keep temperatures around 5 degrees below normal temperatures today, with upper 30s and 40s across the mountains and mid 50s to mid 60s in the valleys. Minimum humidity will be mainly between 20% and 40% away from the deserts today. Zonal flow will bring near normal temperatures to the region Thursday and Friday, with mid 40s to mid 50s across the mountains and 60s to low 70s in the valleys. Showers will move across Central California this evening through Friday night. Most locations from a Monterey/Fresno County line northward will receive between 1 and 2 inches of rainfall. Locations to the south will receive less than a half inch of rainfall, with little or no rainfall expected across Southern California. The snow level will be between 8,000 and 9,000 feet over the Sierra. Showers are expected to push just north of the region Saturday through early next week as a weak ridge pushes into Southern California from the southwest. Temperatures will warm to around 5 degrees above normal Sunday through early next week. The only wind of note through early next week will be westerly winds of 20 to 30 mph with gusts to 50 mph across the wind prone mountain and desert areas Friday afternoon through Saturday evening. Minimum humidity will be mainly above 30% Thursday through early next week.
